**Agreement between Poland and Sweden concerning the use of the broadcast band planned at the RRC 2006 conference.**

The Polish administration accepts the interference level on Polish DVB-T allotments caused by the Swedish DVB-T assignments listed in Annex 1. The Swedish administration accepts the interference level on Swedish DVB-T allotments caused by the Polish DVB-T assignments listed in Annex 1.

In the case that two or more assignments are operating in an SFN the basis for calculation of interference shall be the power sum of all transmitters in the relevant SFN.

Assignments that are situated within an allotment area with the same channel but not linked to that allotment will be treated in the implementation as if they were linked.

The parties agree that any other future implementation of an allotment shall be coordinated if the cumulative interfering field strength exceeds the values listed in Annex 2 on the area of any existing co-channel/co-block allotment.

## Annex 2 to agreement between Poland and Sweden

### Interfering field strength requiring coordination

If the cumulative interfering field strength exceeds the values listed in Table 1-4 below on the boundary of any co-channel/co-block allotment in the Plan, coordination with the other party is needed.

For affected DVB-T it's proposed to use the  $E_{\max \text{ int}}$  for RPC2 and for affected T-DAB it's proposed to use the  $E_{\max \text{ int}}$  for RPC5.

#### DVB-T interfered by DVB-T for 200 MHz and 650 MHz respectively

Reference planning configuration	RPC2
Reference location probability	95%
Reference C/N [dB]	19
Reference ( $E_{\text{med}}$ ) <sub>ref</sub> [dB $\mu$ V/m] at 200 MHz	67
Reference ( $E_{\text{med}}$ ) <sub>ref</sub> [dB $\mu$ V/m] at 650 MHz	78
CF at 200 MHz	12.8
CF at 650 MHz	12.8
IM	2.8
$E_{\max \text{ int}}$ [dB $\mu$ V/m] at 200 MHz	38
$E_{\max \text{ int}}$ [dB $\mu$ V/m] at 650 MHz	49

Table 1  $E_{\max \text{ int}}$  for DVB-T interfered by DVB-T

In UHF the value should be adjusted with respect to frequency with  $30 \cdot \log(f/f_{650})$ , f in MHz.

#### T-DAB interfered with by T-DAB for 200 MHz

Reference planning configuration	RPC5

CF	14.6
IM	2.6
$E_{\max \text{ int}}$ [dB $\mu$ V/m]	39

### Derivation maximum allowable interfering field strength

The maximum allowable interfering field strength,  $E_{max\ int}$ , at any test point given by the input requirement is calculated as follows:

$$E_{max\ int} = E_{med} + f_{corr} - CF - PR + IM$$

where

$E_{med}$  is the minimum median equivalent field strength (in dB $\mu$ V/m) for 200 MHz and 650 MHz, respectively;

$f_{corr}$  is the frequency correction (in dB) for UHF, given by  $30 \cdot \log(f/f_{650})$ ,  $f$  in MHz;

CF is the combined location correction factor:  $CF = q \sqrt{\sigma_w^2 + \sigma_i^2}$ ;

$q$  is the distribution factor;

$\sigma_w$  is the standard deviation of the lognormal distribution of the wanted signal (in dB);

$\sigma_i$  is the standard deviation of the lognormal distribution of the interfering signal (in dB);

PR is the appropriate protection ratio;

When the interfering system is of the same type as the wanted one, PR is equal to C/N for the wanted system's RPC. PR and C/N are taken from Addendum 12 to Document 7-E, input from CEPT to RRC-06.

IM is the implementation margin (in dB).
