Ämne: Spektrumplan för 5G-tester

Dear PTS colleague,

Huawei welcomes the PTS initiative to open up for large-scale 5G trials in Sweden.

We consider it to be a wise and forward-looking initiative which creates opportunities for some market players to carry out field tests of the early 5G equipment which is being currently standardized in 3GPP and other standardization organizations.

However, considering the planned timeline of the 3GPP work on Release 15 (the first release which will address the 5G systems), we could expect that the first stable 5G specifications will be developed by the second half of 2018.

These specifications, in our view, would be the basis for the development of 5G equipment suitable for *large-scale* tests which are proposed by PTS in its "Spectrum Plan for 5G tests".

We are confident that by that time the market will send a stronger request for experimenting with 5G equipment on a large scale and using the spectrum suitable for future 5G commercial deployments.

We look forward to continue supporting the important PTS work on the preparations for the 5G era in Sweden.

Regards,

ALEXANDER GULYAEV
